

“clear out the old downloads, they’re taking up space”

the same request, put to both designs

Routing

commits once;

never sees

what the action did

model called once
names one action

the action runs
delete_file

reply to the user
the action’s own text

----- X -----

nothing returns to the model

**what the action returned goes back to the model,
so it may act again, change course, or stop**

Deciding

sees the result,

then decides

again

model called
names an action

the action runs
list_files

reply to the user
written by the model
