

TWO SWITCHES WERE MOVED

harness design

routing / deciding

deployment

cloud / on-device

crossed, giving four configurations of 240 runs each

EVERYTHING ELSE WAS HELD IDENTICAL

- **the 48 tasks**
and the order they were put in
- **the instructions**
word for word, to the model
- **temperature 0**
no randomness in word choice
- **the scoring**
including a grader blind to configuration
- **the 21 actions**
and the code that runs them
- **the sandbox**
the simulated computer acted on
- **the machine**
its load and its power state
