

what was checked	agreement	not due to chance	
THESE GATE THE SCORE			
<i>a decision counts as correct only if all of these match</i>			
whether to ask for a missing detail		38 of 48	0.250
whether to decline		41 of 48	0.503
which action to reach for		26 of 40	—

THESE DO NOT			
<i>credit when present, nothing lost when absent</i>			
whether to put it in the background		42 of 48	0.200
whether to break it into steps		38 of 48	0.346

The last column is Cohen's kappa: the share of agreement left once the agreement two raters would reach by guessing is taken out. It is low here because these decisions are heavily skewed to one value, which makes guessing look good, so the counts are the more informative number.
